

**ASSIGNMENT- Teaching Assistant (Full Stack
Development (MERN))**

1. Write a MongoDB query to find all documents in a collection where a particular field has a value greater than a certain value.
2. Write a simple Express.js route that takes in a parameter from the URL and returns it as a response.
3. Write a React component that renders a list of items fetched from an API.
4. Write a Node.js script that reads a file, performs a certain operation on the data, and writes the result to another file.
5. Write an HTML form that includes a text input field and a submit button and apply a CSS style to the input field.
